

Business Proposal: The "StageSync" Platform

In the current world, if a company wants to hire an anchor for a wedding, a corporate product launch, or a concert, they usually have to call friends or agents. It's messy and slow.

Goal: To create a single digital "hub" where talent meets opportunity.

❖ Problem Statement

The event hosting industry currently lacks a unified digital marketplace for professional anchors. Talent discovery is inefficient, relying heavily on personal networks, which limits opportunities for skilled anchors and restricts choices for event organizers.

Core Pain Points:

- **For Anchors:** Lack of a professional portfolio space to showcase live event schedules and attract new leads.
- **For Hosts/Companies:** Difficulty in verifying anchor quality, checking availability, and finding niche talent within specific budgets.
- **For Users:** No single source of truth to discover events based on the specific "star power" or style of an anchor.

❖ How it Works (The Three Perspectives)

Who	Their Problem	The Solution (Your App)
The Anchors	They have talent but no place to show their schedule or get "discovered."	A Professional Portfolio where they list past work, fees, and upcoming shows.
The Hosts (Companies)	They struggle to find the "perfect fit" for their specific event budget and style.	A Search Engine to find anchors by language, style, or price, and a "Job Board" to post vacancies.
The Normal Users	They want to go to events but don't know where their favourite anchor is performing next.	An Event Discovery & Ticketing tool to see what's happening and buy a seat.

❖ Business Objective & Impact

The primary business goal is to standardize the talent acquisition process in the event industry.

Market Impact:

- **Market Efficiency:** Instead of 20 phone calls, a company can find an anchor in 3 clicks. This "saves time," and in business, time is money.
- **Transparency:** Implementing a structured review and rating system ensures quality control, which is currently missing in the unorganized sector.
- **Monetization Potential (Future Goal):** Beyond a simple directory, the platform can scale through commission-based ticket sales, premium listings for anchors, and featured event advertisements for companies.

❖ Features

	Anchor	Hosts/Companies	Normal User
Primary Features	• Digital Portfolio • Availability Calendar • Find Events • Event Application	• "Anchor Wanted" (List their Need) • Find Anchor (search and filter) • Publish event for public (users)	• Event Feed • Ticket Booking • Follow Anchor
Secondary Features	• Display star rating and testimonials from previous company/host • Receive payment from host	• Compare 2-3 anchors side by side to find best • Direct Chat/Message Anchors • Pay Anchor	• Social Sharing • Event Remainder

❖ The Star Schema Skeleton

1. Central Fact Table: Fact_Assignments

This is your **Bridge/Applications** table. It sits in the centre and records every "interaction" between a host, an anchor, and an event.

- **Unique ID** (Primary Key)
- **Event_ID** (Link to Events)
- **Anchor_ID** (Link to Anchor Profiles)
- **Host_ID** (Link to Users)
- **Application_Status** (Pending, Accepted, Rejected)
- **Timestamp** (When did this happen?)

2. Dimension Table: Dim_Users

This is your core **User Table**. It holds the "identity" of everyone on the platform.

- **User_ID** (Unique ID)
- **Name & Email**
- **Password Hash**
- **Role_Type** (Anchor, Host, or Normal User)
- **Account_Created_Date**

3. Dimension Table: Dim_Anchor_Profiles

This is your **Profiles Table**. It contains deep details specifically for the anchors.

- **Profile_ID** (Unique ID)
- **User_ID** (Link back to the User table)
- **Specialization** (e.g., Corporate, Wedding, Comedy)
- **Past Work Links**
- **Base_Fee**
- **Languages_Spoken**
- **Average_Rating** (Calculated field)

4. Dimension Table: Dim_Events

This holds the details for the **Events**.

- **Event_ID** (Unique ID)
- **Host_ID** (The User who created it)
- **Event_Title**
- **Description**
- **Event_Date & Time**
- **Location/City**
- **Status** (Open for Applications, Anchor Hired, Completed)

5. Dimension Table: Dim_Tickets

To satisfy the **Normal User** perspective, you eventually need a way to track who is attending which event.

- **Ticket_ID**
- **Event_ID** (Which show?)
- **User_ID** (Who bought it?)
- **Booking_Date**
